

# KCD WINCH MACHINE WITH CLUTCH

The KCD electric hoist winch can be used in residential construction, ash brick, freight yard warehouse, shopping malls, restaurants, individual workshops, small factories, can make any Angle of moving, lifting, loading, and unloading, it is the better small lifting tool.

The winches can be classified in different ways:

1. According to the power supply, it can be divided into manual, electric and hydraulic winches. Electric winches are commonly used in lifting engineering.
2. According to the transmission form, electric winch can be divided into electric reversible (brake type) and electric friction type (friction clutch type).
3. According to the number of drums, the electric winch can be divided into single drum and double drum.
4. According to the rotation, it can be divided into slow and fast winch. In lifting engineering, slow hoist is generally used.
