

LOAD BINDER

Product introduction

A load binder, also known as a chain binder or chain tensioner, is a mechanical device used to secure and tighten chains, cables, or straps around a load for transportation, lifting, or anchoring purposes. Load binders are commonly used in various industries, including trucking, agriculture, construction, and maritime applications, to ensure that loads are properly secured and do not shift during transit. They come in different types, with the two primary categories being lever binders and ratchet binders
