

MANUAL HAND WINCH

Manual winches are hand-crank operated and don't require a power source. Also known as hand-operated winches, they are portable and suitable for pulling and/or lifting light loads over short distances in environments without power. Their levers rotate an internal gear system that turns the winch's drum and winds and unwinds a cable or rope to pull or lift loads. Manual winches tow vehicles, move debris and materials, and pull boats on and off trailers.

Range 250 kg – 1000 Kg
