

# PULLING & LIFTING MACHINE

Pulling and lifting machines are mechanical devices used to hoist, pull, or lift heavy loads in a controlled and efficient manner. They are commonly employed in various industries, including construction, manufacturing, material handling, and logistics, to move objects that are too heavy to be lifted manually. These machines come in different types and configurations, each designed for specific lifting and pulling tasks. Some common types of pulling and lifting machines include:

Rang Pulling      1 .2 Ton – 8 Ton

Rang Lifting      0.8 Ton – 5 Ton
