

CARGO TROLLEY

Cargo trolley (platform) CRO is purposed to move heavy weights (as a rule, equipment) inside the workshop premise of at the site having strong hard covering. Used in case, when available crane equipment cannot prove required relocation of weight.

The platform rollers are equipped with the covers made of strong synthetic material (polyurethane), that facilitates amortization at motion and decreases mechanical impact onto the floor covering.

The platform working surface is outfit with synthetic covering providing reliable coupling of the weight with the platform and decreases the risk of deformation of the weight surface from contact with the platform.

To provide safety of works and in order to avoid filling up of the weight, it is recommended to use not less than three platforms simultaneously (three support points in different places) at moving of the weight.

Rage 6 Ton – 20 Ton
