

# CLEVIS HOOK

Rang  $\frac{1}{4}$  -  $\frac{3}{4}$

A clevis hook is a type of lifting or rigging hook that is commonly used in various industrial applications for connecting and securing loads, typically with the use of a clevis pin. These hooks have a U-shaped or clevis-shaped end, and they are designed for attaching to cables, chains, or other rigging equipment. Clevis hooks are versatile and have a wide range of uses in lifting and rigging operations.
