

ROUND RING

Rang 2.5 Ton – 20 Ton

Master rings are circular, permanently closed rings. Like a master link, they can be used with wire rope bridles, [chain sling assemblies](#), and other rigging connection points. While master rings can be used to accommodate multiple-leg assemblies, it is less common to see a master ring as the collector link than it is to see an oblong master link in that position. The round shape of a master ring makes it less ideal than an oblong master link for connecting to large, deep crane hooks. Master rings are most often used in fabrication or small machine shops and are otherwise, rarely used. In many cases, an oblong master link could be applied instead.
