U Clamp A Type G.I

U Clamp A type
M.S

Range 3 MM – 80 MM

PRODUCT INTRODUCTION

A "U-clamp" is a type of clamp that is shaped like the letter "U." These clamps are used for securing two objects together or holding something in place by pressing against both sides of an object. U-clamps are commonly used in various applications, such as woodworking, metalworking, automotive repairs, and construction. The U-clamp typically consists of a U-shaped metal or plastic bracket with threaded holes on each end. It can be tightened by inserting bolts through the holes and using nuts to secure the clamp around the objects you want to hold together. U-clamps come in various sizes and designs to accommodate different needs, and they are often used for joining pipes, fastening panels, or stabilizing structures.

The specific use and design of a U-clamp can vary, so it's essential to choose the right type and size of U-clamp for your particular application. They are versatile tools and can be used in a wide range of tasks that involve clamping or holding objects together.
